DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 28-30 and 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Nutt (2837069).

Nutt discloses a fan 12, a hydrodynamic clutch 14, and a temperature responsive valve/filling controller 13. In regard to claim 30, the drive train is cited as an alternative choice and therefore not necessary. The operating parameter is the engine speed, via the drive belt 17, which is related to power output. The very nature of the system is that a torque is inherently transmitted to the fan via the clutch. The mere recitation of "optimizing" is deemed to be met by Nutt.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 31 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nutt as applied to claim 28 above, and further in view of Buchholz (6894883).

Nutt discloses a simply thermostatic valve. Buchholz discloses operating a fan clutch 20 in response to coolant temperature sensor 35 via a PID governor. PID control inherently

comprises rate of change. The ranges read on discrete temperature levels processed by the governor.

Allowable Subject Matter

Claims 18-27 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The newly listed art is merely cited of interest to show fans (some with clutches) controlled by various engine parameters.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
